Curriculum for BS Cyber Security

DEPARTMENT OF COMPUTER SCIENCE UNIVERSITY OF PESHAWAR SESSION 2024

1 BS Cyber Security

The BS Cyber Security program intends to produce skilled professionals to understand the processes that impact information security, safeguarding information assets, collection and preservation of digital evidences, analysis of data, and identification and fixing of security vulnerabilities. The program will equip students with the fundamental knowledge of computer science that forms the technical foundation of the field, with an essential focus on experiential learning through laboratory exercises in the security courses. This degree is a state-of-the-art course with a perfect blend of Cyber Security that is designed to set the graduates up for immediate industry success by combining and leveraging today's cutting-edge technology with real-world scenarios.

1.1 Program Educational Objectives

Program Educational Objectives (PEOs) for Bachelor of Studies in Cyber Security (BS CySec): **PEO(1):** Graduates will demonstrate advanced expertise in Cyber Security, possessing indepth knowledge of cybersecurity principles, technologies, and best practices.

PEO(2): Graduates will exhibit proficiency in practical skills related to threat detection, incident response, and secure systems development.

PEO(3): Graduates will embody ethical principles and values essential for responsible cybersecurity practice and global cybersecurity initiatives.

1	Academic Education	Completion of an accredited program (BS CySec) of study designed to prepare graduates as computing professionals
2	Knowledge for Solving Computing Problems	Apply knowledge of computing fundamentals, knowledge of a computing specialization, and mathematics, science, and domain knowledge appropriate for the computing specialization to the abstraction and conceptualization of computing models from defined problems and requirements
3	Problem Analysis	Identify, formulate, research literature, and solve complex computing problems reaching substantiated conclusions using fundamental principles of mathematics, computing sciences, and relevant domain disciplines
4	Design/ Development of Solutions	Design and evaluate solutions for complex computing problems, and design and evaluate systems, components, or processes that meet specified needs with appropriate consideration for public health and safety, cultural, societal, and environmental considerations
5	Modern Tool Usage	Create, select, adapt and apply appropriate techniques, resources, and modern computing tools to complex computing activities, with an understanding of the limitations
6	Individual and Team Work	Function effectively as an individual and as a member or leader in diverse teams and in multi-disciplinary settings

1.2 Program Learning Outcomes (PLOs)

7	Communication	Communicate effectively with the computing community and with society at large about complex computing activities by being able to comprehend and write effective reports, design documentation, make effective presentations, and give and understand clear instructions
8	Computing Professionalism and Society	Understand and assess societal, health, safety, legal, and cultural issues within local and global contexts, and the consequential responsibilities relevant to professional computing practice
9	Ethics	Understand and commit to professional ethics, responsibilities, and norms of professional computing practice
10	Life-long Learning	Recognize the need, and have the ability, to engage in independent learning for continual development as a computing professional

Mapping BS-Cyber Security PEOs to GA's

BS Cyber Security					
Graduate Attributes (GA's)	PEO (1)	PEO (2)	PEO (3)		
GA-1 Academic Education	✓				
GA-2 Knowledge for Solving Computing Problems	\checkmark				
GA-3 Problem Analysis	~				
GA-4 Design/Development of Solutions	√	√			
GA-5 Modern Tool Usage	✓	✓			
GA-6 Individual and Teamwork		✓			
GA-7 Communication		√	✓		
GA-8 Computing Professionalism and Society			~		
GA-9 Ethics			~		
GA-10 Life-long Learning			✓		

2 HEC-NCEAC Scheme of Studies for BS Cyber Security Program

The HEC-NCEAC curriculum structure for BS Cyber Security is given overall general split followed by the courses contained in each area;

2.1 Structure for BS in Cyber Security

The required number of courses and credit hours to be taken from 8 broad areas of BS in CySec are as follows:

Areas	Credit	Courses
	Hours	
Computing Core	46	14
Domain Core	18	06
Domain Electives	21	07
Mathematics & Supporting Courses	12	04
Elective Supporting Courses	03	01
General Education	33	12
Total	133	44

2.2 Area-wise Curriculum Split for BS Cyber Security

#	Sem #	Code	Pre-Req	Course Title	Domain	Cr Hrs.	
		BS C	ySec Com	puting Core (46/133) 14 Cour	ses		
1	1	CS102		Programming Fundamentals	Core	4(3-3)

3 Course Contents BS CySec

This section provides detailed Course Outline for all courses from all areas of BS CySec, including the course title, course code, credit hours split, pre-requisite, course introduction, course learning outcomes, and Reference material.

3.1 BS CySec Computing Core (46/133) 14 Courses

Course Name:	Programming Fundamentals
Course Code:	CS102
Course Area:	Computing Core
Credit Hours:	4 (3-3)
Contact Hours:	3-3
Pre-requisites:	None

Course Introduction

This course provides fundamental concepts of programming to freshmen. The courses is prerequisite to many other courses, therefore, students are strongly advised to cover all contents and try to achieve CLOs to the maximum possible level. The course may be taught as language independent. Further, it is up to the university to choose any language for the practical/Lab purpose but that must be latest and market oriented.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Understand basic problem solving steps and logic constructs	C2 (Understand)
CLO 2	Apply basic programing concepts	C3 (Apply)
CLO 3	Design and implement algorithms to solve real world problems	C6 (Create)

Introduction to Programming and Importance for a CS Graduate, Basics of Programming and Software Development, C++ Development Environment and Basic Program Construction, Header Files and Library Files, Variables and Data Types, Operators (Arithmetic, Logical, Increment, Decrement) and Precedence, Type Conversion, Input and Output Statements in C++, IF Statement, IF -ELSE Statement, ELSE-IF Statement, Conditional Operator Switch Statement, GOTO Statement, Arrays, One Dimensional and Two Dimensional Arrays, FOR Loop, Nested FOR loops, Loops with Arrays, WHILE Loop, DO-WHILE Loop, Break Statement, Continue Statement, Functions and its Importance, Parts of Functions, Passing Arguments to Functions, Returning Values from Functions, Inline Functions, Default Arguments, Recursion, Strings, String Manipulation Functions, Structures and its Importance, Declaring Structures and Structures Variables, Accessing Structures Members, Nested Structures, Passing Structures Function, Enumerations, Array of Structures, Pointers and its Importance, Pointers and Arrays, Pointers and Function (Call by Value and Call by Reference), Pointers and Strings, File Handling in C++, Reading from a File, Writing to a File.

Reference Material

The following is the recommended list of books (or their latest editions):

- 1. Deitel, Paul, and Harvey Deitel. C++ How to Program. 10th Edition., Prentice Hall, 2016.
- 2. Lafore, Robert. Object-Oriented Programming in C++. 4th Edition., Sams, 2002.
- 3. Sahay, S. Object Oriented Programming with C++. 1st Edition., Oxford University Press, 2012.
- 4. Kanetkar, Yashavant. Basic Programming in C++. 1st Edition., BPB Publications, 2004.

Course Name:	Object Oriented Programming
Course Code:	CS123
Course Area:	Computing Core
Credit Hours:	4 (3-3)
Contact Hours:	3-3
Pre-requisites:	Programming Fundamentals

Course Introduction

The course aims to focus on object-oriented concepts, analysis and software development. The basic concept of OOP is covered in this course.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Understand principles of object oriented paradigm	C2 (Understand)
CLO 2	Identify the objects & their relationships to build object oriented solution	C4 (Analyze)
CLO 3	Model a solution for a given problem using object oriented principles	C3 (Apply)
CLO 4	Examine an object oriented solution	C5 (Evaluate)

Object Oriented Programming (OOP) and its Significance as a Modeling Technique. Comparison of Structured Programming and OOP, Classes and Objects in C++, Abstraction, New User Defined Data Types, Creating Objects from Classes, Accessing Member, Access Specifiers, Member Functions, Defining Member Functions, Constructors and Properties, Default Constructor, Constructor Overloading, Copy Constructor, Deep Copy, Shallow Copy, Destructors, "this" Pointer, Constant Member Function, Static Variables, Accessing Static Data Member, Static Member Function, Comparison of Global Variables and Static Variable, Arrays of Objects, Pointer to Objects Templates, Function Templates, Class Templates, Data Encapsulation and Abstraction, Importance of Data Encapsulation and Abstraction, Correctly Using the Access Modifiers, Friend Functions, Composition, Aggregation, Operator Overloading, Overloading Assignment Operator, Friend Function and Operator Overloading, Unary Operators Overloading, Inheritance and Importance, Inheritance in C++, Comparison of Overloading and Overriding, Hierarchy of Inheritance, Types of Inheritance, Private Inheritance, Protected Inheritance Multiple Inheritance Problem in Multiple Inheritance, Polymorphism and Importance, Virtual Functions, Static Binding, Dynamic Binding, Abstract Classes and Concrete Classes, Virtual Destructors, Virtual Functions and Pure Virtual Functions, Virtual Functions Usage, Dynamic Dispatch, Namespaces and Using Namespaces, Memory Management and Importance, Memory Areas(Heap, Stack), Use of new Operator, malloc() and calloc() Functions Calls, Exception Handling.

Course Name:	Digital Logic Design
Course Code:	CS122
Course Area:	Computing Core
Credit Hours:	3(2-3)
Contact Hours:	2-3
Pre-requisites:	None

The course introduces the concept of digital logic, gates and the digital circuits. Further, it focuses on the design and analysis combinational and sequential circuits. It also serves to familiarize the student with the logic design of basic computer hardware components.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Acquire knowledge related to the concepts, tools and - techniques for the design of digital electronic circuits	C1 (Remember)
CLO 2	Demonstrate the skills to design and analyze both - combinational and sequential circuits using a variety of techniques	C3 (Apply)
CLO 3	Apply the acquired knowledge to simulate and implement small-scale digital circuits	C3 (Apply)
CLO 4	Understand the relationship between abstract logic characterizations and practical electrical implementations.	C2 (Understand)

Course Outline

Introduction to Numbering Systems, Conversion and Complements, Binary Arithmetic, Boolean Algebra, Boolean Functions, Standard and Canonical Forms of Boolean, Functions, Logic Gates, Implementation of Boolean Functions with AND, OR, and Not Gates. Simplification of Boolean Functions by Algebraic Manipulation, Map and Tabulation Methods, Boolean Function Implementation with NAND and NOR Gates. Combinational Logic Design and Analysis, Adders, Subtractions, Code Converters. Combinational Logic with MSI and LSI, Binary Parallel Adder, Decimal Adder, BCD Adder, Magnitude Comparator, Decoders, De-multiplexers, Encoders, Multiplexers, ROMs, PLAs and its Implementations. Sequential Logic, Introduction to Latches, Flip Flops, Types of Flip-Flops, Registers, Counters, Timing Sequence and Memory Unit. Asynchronous Sequential Logic, Digital Integrated Circuits, RTL and DTL Circuits, MOS, CMOS. Digital Logic Simulator as Logic Gate Simulator, Multimedia Logic.

- 2. Floyd, Thomas L. Digital Computer Electronics. 9th Edition., Pearson Education India, 2011.
- 3. Floyd, Thomas L. Digital Fundamentals. 11th Edition., Pearson, 2011.

Course Name:	Data Structures
Course Code:	CS202
Course Area:	Computing Core
Course Code:	CS202

Credit Hours:	4 (3-3)
Contact Hours:	3-3
Pre-requisites:	Object Oriented Programming

The course is designed to teach students structures and schemes, which allow them to write programmer to efficiently manipulate, store, and retrieve data. Students are exposed to the concepts of time and space complexity of computer programs.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Implement various data structures and their algorithms and apply them in implementing simple applications	C3 (Apply)
CLO 2	Analyze simple algorithms and determine their complexities.	C4 (Analyze)
CLO 3	Apply the knowledge of data structure to other application domains.	C3 (Apply)
CLO 4	Design new data structures and algorithms to solve problems.	C6 (Create)

Course Outline

Introduction and Overview, Abstract Data Type, Arrays, Stacks(Push and Pop), Infix, Postfix and Prefix, Basic Operations, Queues(Insertion, Deletion, De-queues), Heap, Lists, Linked Lists, Searching(Binary and Sequential), Sorting, Sorting and Hashing, Recursion, Trees, Linked Lists Implementation, Binary Trees, B-Trees, Trees Traversal, Basic Operations, Traversals Sets, Graph, Representation of Directed and Undirected Graphs, Traversals, Minimum Cost Spanning Tree, Complexity(Space and Time).

Course Name:	Database Systems
Course Code:	CS206

Course Area:	Computing Core
Credit Hours:	4 (3-3)
Contact Hours:	3-3
Pre-requisites:	None

The course aims to introduce basic database concepts, different data models, data storage and retrieval techniques and database design techniques. The course primarily focuses on relational data model and DBMS concepts

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1 CLO 2	Explain fundamental database concepts. Design conceptual, logical and physical database schemas using different data models.	C1 (Remember) C3 (Apply)
CLO 3	Identify functional dependencies and resolve database anomalies by normalizing database tables.	C4 (Analyze)
CLO 4	Use Structured Query Language (SQL) for database definition and manipulation in any DBMS	C3 (Apply)

Course Outline

Basic database concepts, Database approach vs. file based system, database architecture, three level schema architecture, data independence, relational data model, attributes, schemas, tuples, domains, relation instances, keys of relations, integrity constraints, relational algebra, selection, projection, Cartesian product, types of joins, normalization, functional dependencies, normal forms, entity relationship model, entity sets, attributes, relationship, entity-relationship diagrams, Structured Query Language (SQL), Joins and subqueries in SQL, Grouping and aggregation in SQL, concurrency control, database backup and recovery, indexes, NoSQL systems

Course Name:	Information Security
Course Code:	CS203

Course Area:	Computing Core
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	None

This course provides a broad overview of the threats to the security of information systems, the responsibilities and basic tools for information security, and the levels of training and expertise needed in organizations to reach and maintain a state of acceptable security. It covers concepts and applications of system and data security. Areas of particular focus include secure network design, implementation and transition issues, and techniques for responding to security breaches.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy
		Domain Level
CLO 1	Explain key concepts of information security such as design principles, cryptography, risk management, and ethics	C1 (Remember)
CLO 2	Discuss legal, ethical, and professional issues in information security	C2 (Understand)
CLO 3	Apply various security and risk management tools for achieving information security and privacy	C3 (Apply)
CLO 4	Identify appropriate techniques to tackle and solve problems in the discipline of information security	C4 (Analyze)

Course Outline

Information security foundations, security design principles; security mechanisms, symmetric and asymmetric cryptography, encryption, hash functions, digital signatures, key management, authentication and access control; software security, vulnerabilities and protections, malware, database security; network security, firewalls, intrusion detection; security policies, policy formation and enforcement, risk assessment, cybercrime, law and ethics in information security, privacy and anonymity of data.

Course Name:	Artificial Intelligence
Course Code:	CS201

Course Area:	Computing Core
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Object Oriented Programming

Artificial Intelligence has emerged as one of the most significant and promising areas of computing. This course focuses on the foundations of AI and its basic techniques like Symbolic manipulations, Pattern Matching, Knowledge Representation, Decision Making and Appreciating the differences between Knowledge, Data and Code. AI programming language Python has been proposed for the practical work of this course.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Understand the fundamental constructs of Python programming language.	C2 (Understand)
CLO 2	Understand key concepts in the field of artificial intelligence	C2 (Understand)
CLO 3	Implement artificial intelligence techniques and case studies	C3 (Apply)

Course Outline

An Introduction to Artificial Intelligence and its applications towards Knowledge Based Systems; Introduction to Reasoning and Knowledge Representation, Problem Solving by Searching (Informed searching, Uninformed searching, Heuristics, Local searching, Minmax algorithm, Alpha beta pruning, Game-playing); Case Studies: General Problem Solver, Eliza, Student, Macsyma; Learning from examples; ANN and Natural Language Processing; Recent trends in AI and applications of AI algorithms. Python programming language will be used to explore and illustrate various issues and techniques in Artificial Intelligence

Course Name:	Computer Networks
Course Code:	CS121

Course Area:	Computing Core
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	None

This course introduces the basic concept of computer network to the students. Network layers, Network models (OSI, TCP/IP) and protocol standards are part of the course.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy
		Domain Level
CLO 1	Describe the key terminologies and technologies of computer networks	C1 (Remember)
CLO 2	Explain the services and functions provided by each layer in the Internet protocol stack.	C4 (Analyze)
CLO 3	Identify various internetworking devices and protocols and their functions in a networking	C2 (Understand)
CLO 4	Analyze working and performance of key technologies, algorithms and protocols	C4 (Analyze)

Course Outline

Networking Concepts, Topologies: Bus, Star, Ring, Tree, Mesh, Need of Networks, Peerto-Peer networks, Client- Server Networks, Hybrid Networks, Network Models, TCP/IP Model, OSI Model, Data Link Layer, Error Detection/Correction & Control Techniques, Error Control Techniques, Stop and Wait ARQ, Go-Back-N ARQ, Selective-Reject ARQ, High Level Data Link Control Protocols (HDLC, Stop & Wait, Sliding Window, Access Techniques, Random Access techniques, Aloha, Slotted Aloha, CSMA, CSMA/CD, Controlled Access Techniques, Reservation, Token Passing , Internetworking Devices, Hubs, Switches, Routers. NICs, Switching Techniques, Circuit and Packet Switching, Message Switching, Structure of a Switch, LAN Architectures, Wired LANs, IEEE Standards, Ethernet, Fast and Gigabit Ethernet, Logical Addressing, IPv4 and IPv6 Addressing and Packet Structure, Transition from IPv4 to IPv6, ICMPv6, IGMP, Forwarding and Routing, Unicast and Multicast Routing Protocols, UDP, TCP and SCTP Protocols, Fundamentals of DNS, FTP, SMTP, WWW, HTTP and SNMP Protocols.

Course Name:	Software Engineering
Course Area:	Computing Core
Course Code:	CS204
Credit Hours:	3 (3-0)
Contact Hours:	3-0
Pre-requisites:	None

The students will be provided with a more concise description of state-of-the-art software process models and application of software engineering concepts as used in a professional software development environment. This course covers advanced theoretical concepts in software engineering and provides extensive hands-on experience in dealing with various issues of software development. It involves a semester-long group software development project. Emphasis will be placed on agile software development methodologies for team development, quality assessment, and knowledge management in software engineering.

CLO No.	Course Learning Outcome	Bloom's Taxonomy Domain Level
CLO-1	Understand various software engineering processes and activates	C 2 (Understand)
CLO-2	Apply the system modeling techniques to model a medium size software system	C 3 (Apply)
CLO-3	Apply software quality assurance and testing principles to medium size software systems	C3 (Apply)

Course Outline

Professional software development, Software engineering practices, Software process structure, Traditional software process models, Agile software development, Agile process models(XP, Scrum), Agile development practices, Requirements engineering process, Functional and non-functional requirements, Model driven engineering, UML diagrams: Context models, Interaction models, Structural models, behavioral models, , Architectural design, Detailed design and implementation, , Design patterns, Coding standards, Software testing and quality assurance, Software deployment, maintenance, evolution, Overview of project management(Introduction to MS Project or related tool) Introduction to software development, environment (Concepts of Build, Continuous Integration/Continuous delivery, Configuration management (GitHub, GitLab, etc).

Course Name:	Computer Organization and Assembly Language
Course Code:	CS207
Course Area:	Computing Core
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Digital Logic Design

Course Introduction

The main objective of this course is to introduce the organization of computer systems and usage of assembly language for optimization and control. Emphasis should be given to expose the low-level logic employed for problem solving while using assembly language as a tool. At the end of the course the students should be capable of writing moderately complex assembly language subroutines and interfacing them to any high level language.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Acquire the basic knowledge of computer organization computer architecture and assembly language	C1 (Remember)
CLO 2	Understand the concepts of basic computer organization, architecture, and assembly language techniques	C2 (Understand)
CLO 3	Solve the problems related to computer organization and assembly language	C3 (Apply)

Course Outline

Introduction to computer systems: Information is bits + context, programs are translated by other programs into different forms, it pays to understand how compilation systems work, processors read and interpret instructions stored in memory, caches matter, storage devices form a hierarchy, the operating system manages the hardware, systems communicate with other systems using networks; Representing and manipulating information: information storage, integer representations, integer arithmetic, floating point; Machine-level representation of programs: a historical perspective, program encodings, data formats, accessing information, arithmetic and logical operations, control, procedures, array allocation and access, heterogeneous data structures, putting it together: understanding pointers, life in the real world: using the gdb debugger, out of-bounds memory references and buffer overflow, x86-64: extending ia32 to 64 bits, machine-level representations of floating-point programs; Processor architecture: the Y86 instruction set architecture, logic design and the Hardware Control Language (HCL), sequential Y86 implementations, general principles of pipelining, pipelined Y86 implementations

Course Name:	Operating Systems
Course Code:	CS208
Course Area:	Computing Core
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Data Structures

Course Introduction

To help students gain a general understanding of the principles and concepts governing the functions of operating systems and acquaint students with the layered approach that makes design, implementation and operation of the complex OS possible.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Understand the characteristics of different structures of the Operating Systems and identify the core functions of the Operating Systems.	C2 (Understand)
CLO 2	Analyze and evaluate the algorithms of the core functions of the Operating Systems and explain the major performance issues with regard to the core functions.	C4 (Analyze)
CLO 3	Demonstrate the knowledge in applying system software and tools available in modern operating systems.	C3 (Apply)

Course Outline

Introduction & Overview, Computer Organization, Interrupts, Components of Operating System, Processes & PCB, Process Creation, Process Management, Processes, Process States, Process State Models, Inter-Process Communication, Process Scheduling, Threads, Synchronization Issues, Busy Waiting Algorithm & Bakery Algorithm, TSL & Priority Inversion, Semaphores, Classical Synchronization Problems, Dead Locks, Deadlock Detection, Deadlock recovery, Deadlock Avoidance, Deadlock Prevention, Memory management, Real Memory Organization and Management, Virtual Memory Organization: Paging, Segmentation, Virtual Memory Management: Placement, Replacement, and Fetch Strategies Input Output Management, File System.

Course Name:	Analysis of Algorithms
Course Code:	CS205
Course Area:	Computing Core
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Data Structures

Course Introduction

Detailed study of the basic notions of the design of algorithms and the underlying data structures. Several measures of complexity are introduced. Emphasis on the structure, complexity, and efficiency of algorithms.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	To provide a Comprehensive study of Computer Algorithms	C2 (Understand)
CLO 2	To discuss the solutions for classical problems and their complexity	C4 (Analyze)
CLO 3	To provide in depth coverage to Analysis and Design of new Algorithms.	C3 (Apply)
CLO 4	Graph algorithms, including single source and all-pairs shortest paths, and at least one minimum spanning tree algorithm	C1 (Remember)

Course Outline

Introduction; role of algorithms in computing, Analysis on nature of input and size of input Asymptotic notations; Big-O, Big Ω , Big Θ , little- ω , little- ω , Sorting Algorithm analysis, loop invariants, Recursion and recurrence relations; Algorithm Design Techniques, Brute Force Approach, Divide-and-conquer approach; Merge, Quick Sort, Greedy approach;

Bloom's Taxonomy Domain Level

C6 (Create)

Dynamic programming; Elements of Dynamic Programming, Search trees; Heaps; Hashing; Graph algorithms, shortest paths, sparse graphs, String matching; Introduction to complexity classes

3.2 BS CySec Domain Core (18/133) 6 Courses

This CySec **Domain Core** area consists of 6 courses, comprising 18 credit hours, as outlined below:

Course Name:	Introduction to Cyber Security
Course Code:	CS303
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Information Security

Course Introduction

This course provides students an introduction to common cyber security threats, vulnerabilities, and risks related to web applications, networks, software and mobile applications. The course provides basic concepts and terminology used in the information and cyber security fields. Moreover, it will also enable students to differentiate between the various forms of malware and how they affect computers and networks.

CLO No. Course Learning Outcomes	Bloom's Taxonomy Domain Level
----------------------------------	-------------------------------

CLO-1	To be able to identify computer system threats	C2 (Understand)
CLO-2	To be able to identify Malware attacks, and understand the stages of attack and payloads	C2 (Understand)
CLO-3	Implement various cryptographic techniques and simulate	C3 (Apply)

attack scenarios

Course Outline

Introduction to Cyber security; Networks and the Internet; cyber threat landscape; understanding security; information security Principles (Confidentiality, Integrity, Availability); Information Security Terminology; Who are the attackers; Advanced Persistent Threat (APT); Malware, types of malware; Attacks using malware; Malware Attack Lifecycle: Stages of Attack; Social engineering attacks; types of payload; Industrial Espionage in Cyberspace; Basic cryptography; Web application attacks; Database security; Cyber kill chain; Privacy and anonymity; Network security; Software security; Mobile device security; Mobile app security; Cyber Terrorism and Information Warfare; Introduction to Digital Forensics; Digital Forensics Categories.

Course Name:	Information Assurance
Course Code:	C\$305
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	None

To understand the role and interaction of policies, laws, procedures, management issues, and technical issues in protecting information resources.

CLO No.	Course Learning Outcomes	Bloom's Taxonom	ny Domain Level
CLO-1	Apply security governance principles; org processes; developing and implementing a security policy.	anizational a documented	C3 (Apply)
CLO-2	Understand and apply risk management co	oncepts	C2 (Understand)
CLO-3	To understand the business, legal, and tech knowledge needed to secure vital governn business assets.	hnical nent and	C2 (Understand)

Course Outline

Introduction to (IS) Information System (Concept, Design, Functions, Architecture, Components and applications of IS); Secure System Planning and Administration; Information Security Policies and Procedures; Asset Management; Organizational and Human Security; Cyber Security Management Concepts; NIST Cyber Security Framework; Enterprise Roles and Structures; Strategic Planning; Security Plans and Policies; Contingency Planning; Laws; Laws and Regulatory Requirements; Security Standards and Controls, Risk Management Process, NIST Risk Management Framework, Security Metrics and Key Performance Indicators (KPIs); Physical Security and Environmental Events; Contingency Planning; Security Education, ISO 27001 Compliance, Training, and Awareness. Introduction to Fintech IS standards and Risk Management.

Course Name:	Network Security
Course Code:	CS332
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Introduction to Cyber Security

The module aims to develop core competencies in the fields of Network security and offer the opportunity of learning the current network security landscape, understanding current threats and vulnerabilities and examining ways of developing effective countermeasures. It also provides a brief overview to network forensics for analyzing network traffic for the purposes of information gathering, legal evidence, or intrusion detection.

^

CLU NO.	Course Learning Outcomes	Bloom's Taxon	omy Domain Level
CLO-1	To be able to understand network security	threats and	C2 (Understand)
	methods for security networks		
CLO-2	To be able to secure wired networks by de	ploying	C3 (Apply)
	various methods		
CLO-3	To be able to secure wireless networks by	deploying	C3 (Apply)
	various methods		

Course Outline

Introduction to network security, Networking Concepts and Protocols, Network Threats and Vulnerabilities, Network Security Planning and Policy, Access Control, Defense against Network Attacks, DOS and DDOS detection and prevention, Firewalls, Intrusion Detection and Prevention Systems, Antivirus Filtering, Naming and DNS Security, DNSSEC, IP security, Secure Sockets Layer, VPN, Packet Sniffing and spoofing, Honeypot, Ethernet Security, Wireless Security, Wireless Attacks, Wireless LAN Security with 802.11i, Wireless Security Protocols, Wireless Intrusion Detection, Physical access and Security, Tor Network, Network Forensics. Defense against Network Attacks, Security Architecture of autonomous vehicles, Security requirements of autonomous vehicles.

- 5. Stallings, William. Cryptography and Network Security: Principles and Practices. 8th ed., Pearson, 2021. Print.

Course Name:	Secure Software Design and Development	
Course Code:	CS333	
Credit Hours:	3 (2-3)	
Contact Hours:	2-3	
Pre-requisites:	Introduction to Cyber Security	

The module aims to develop core competencies in the fields of Secure Software Concepts, Secure Software Requirements, Secure Software Design, Secure Software Implementation/Coding, and Secure Software Testing. The course details the software security activities that need to be incorporated throughout the software development lifecycle. It provides comprehensive coverage that includes the people, processes, and technology components of software, networks, and host defenses.

CLO No. Course Learning Outcomes

Bloom's Taxonomy Domain Level

- CLO-1 A good comprehension of software security standards, C2 (Understand) models, processes and best practices that need to be incorporated throughout the software development lifecycle.
- CLO-2 Identify insecure programming patterns and the ability to C2 (Understand) replace them with secure alternatives.
- CLO-3 Know tools for software security analysis and testing, and the ability to use them in practice and understand their capabilities and limitations.

Course Outline

Secure software concepts; System issues; System properties; Software Project Time Management; Software Project Costing; Software Quality Assurance; Security Concepts in the SDLC; Risk management; Security standards (e.g., coding standards, NIST standards, Federal Information Processing Standards); Best practices (e.g., OWASP development guide, OWASP code review guide, OWASP testing guide); Security methodologies (e.g., Socratic Methodology, Operationally Critical Threat, Asset, and Vulnerability Evaluation, STRIDE and DREAD, Open Source Security Testing Methodology Manual); Security frameworks (e.g., Zachman Framework, Control Objectives for Information and Related Technology, Sherwood Applied Business Security Architecture (SABSA)); Regulations- Privacy and Compliance; Security Models (e.g., BLP Confidentiality Model, Clark and Wilson Model (Access Triple Model)); Trusted Computing; Secure Software Requirements (Sources for Security Requirements, Types of Security Requirements); Secure Software Design (Design consideration, Information Technology Security Principles and Secure Design, Designing Secure Design Principles); Design Processes; Secure Software Implementation/Coding; Software Development Methodologies; Common Software Vulnerabilities and Controls; Defensive Coding Practices—Concepts and Techniques; Code Vulnerabilities and Avoiding Polymorphic Malware Attacks: Buffer overflow, Format string bug, Code vulnerabilities SQL Injection, Cross-site Scripting, Cross-site Request Forgery, Session management, Replication of vulnerabilities and exploitation; Secure Software Testing; Security Testing Methodologies; Software Security Testing; Software Acceptance; Legal Protection Mechanisms; Software Deployment- Operations- Maintenance and Disposal, Introduction to SCADA Security.

Reference Material

Course Name:	Digital Forensics
Course Code:	CS304
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Introduction to Cyber Security

Course Introduction

This course is an introduction to computer forensics and investigation. It provides an understanding of how to conduct investigations to correctly gather, analyze and present digital evidence to different audiences. It also outlines the tools to locate and analyze digital evidence on a variety of devices, how to keep up to date with changing technologies, and laws and regulations in digital forensics.

CLO No.	Course Learning Outcomes	Bloom's Taxono	omy Domain Level
CLO-1	To develop knowledge about forensic law,	, standards,	C2 (Understand)
	regulations and ethical values		
CLO-2	To be able to conduct digital forensics for	multiple	C3 (Apply)
	platforms and applications by various tool	S	
CLO-3	To be able to generate reports based on dig tools for security systems and platforms	gital forensic	C3 (Apply)

Course Outline

An introduction to Digital Forensics; use of digital forensics; Key technical concepts; Challenges in Digital Forensics ; The Difference between Computer Experts and Digital Forensics Experts; Investigative Process Methodologies ; Education, Training, and Awareness; Laws, Standards, and Regulations; Ethics and Professional Conduct; Digital Evidence Management; Collecting evidence; Antiforensics; Network forensics; Mobile and Embedded Forensics; Cloud forensics; Internet Forensics; social media forensics; Investigation Methods for Collecting Digital Evidence; Digital Forensic Readiness; Digital forensics tools; Discovery of Computers and Storage Media; Discovery of Audio/ Video Evidence; Data Visualization; Data Sources; Graphing and Charting; Analyzing Data; Data Distributions; Analysis Scenarios; Data Visualization Tools, Legal and ethical issues in digital forensic.

Reference Material

Course Name:	Parallel and Distributed Computing
Course Code:	CS403
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Object Oriented Programming, Operating Systems

Course Introduction

In this course student will learn about parallel and distributed computers. They will be able to write portable programs for parallel or distributed architectures using Message-Passing Interface (MPI) library with analytical modeling and performance of parallel programs. They can also analyze complex problems with shared memory programming with OpenMP.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Learn about parallel and distributed computers.	C1 (Remember)
CLO 2	Coding programs for parallel or distributed architectures using Message-Passing Interface (MPI) library	C3 (Apply)
CLO 3	Analyze complex problems with shared memory programming with openMP.	C4 (Analyze)

Course Outline

Asynchronous/synchronous computation/communication, concurrency control, fault tolerance, GPU architecture and programming, heterogeneity, interconnection topologies, load balancing, memory consistency model, memory hierarchies, Message passing

interface (MPI), MIMD/SIMD, multithreaded programming, parallel algorithms & architectures, parallel I/O, performance analysis and tuning, power, programming models (data parallel, task parallel, process-centric, shared/distributed memory), scalability and performance studies, scheduling, storage systems, synchronization, and tools (Cuda, Swift, Globus, Condor, Amazon AWS, OpenStack, Cilk, gdb, threads, MPICH, OpenMP, Hadoop, FUSE).

3.3 BS CySec Domain Elective (21/133) 7 Courses

This BS CySec Domain Electives has 7 courses comprising 21 credit hours, as outlined below:

Course Name:	Vulnerability Assessment & Reverse Engineering
Course Code:	CS322
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Introduction to Cyber Security

Course Introduction

The course aims to develop core competencies in the field of vulnerability assessment covering software, networks and Web applications. It also covers reverse engineering techniques to analyze software, exploit targets, and defend against security threats like malware and viruses.

CLO No.	Course Learning Outcomes	Bloom's Taxono	my Domain Level
CLO-1	Basic Understanding of Hacking and Ethio	cal Hacking.	C2 (Understand)
CLO-2	Apply techniques for vulnerability assessment penetration testing.	nent and	C3 (Apply)
CLO-3	Understand Software vulnerabilities, Netw	vork	C2 (Understand)
	vulnerabilities, Types of Malware and its	Analysis.	

Understanding the need for security assessments; Classifying vulnerabilities; Software vulnerabilities; Network vulnerabilities; Vulnerability assessment versus penetration testing; Vulnerability Assessment Tools; Vulnerability management Regulatory compliance; Calculating ROIs; Application review process; Pre-assessment; Code navigation; Codeauditing tactics; Memory corruption; understanding issues in programming languages; Steps in Reverse engineering, Common tools used for Reverse engineering; Binary Obfuscation techniques; Understanding core assembly concepts to perform malicious code analysis, Identifying key assembly logic structures with a disassembler, Malware analysis; Types of malware analysis; Malware Taxonomy; Static analysis; Dynamic analysis; Malware Inspection; Malware analysis tools; Sandboxing and virtualization, Introduction to threat intelligence platform.

Reference Material

The following is the recommended list of books (or their latest editions):

- Anton, Philip S. Finding and Fixing Vulnerabilities in Information Systems: The Vulnerability Assessment and Mitigation Methodology. Addison-Wesley Professional, 2002.
- 2. Dowd, Mark. The Art of Software Security Assessment: Identifying and Preventing Software Vulnerabilities. Addison-Wesley Professional, 2005.
- 3. Eilam, Eldad. Reversing: Secrets of Reverse Engineering. 3rd ed., Wiley, 2014.
- 4. Sikorski, Michael. Practical Malware Analysis: The Hands-On Guide to Dissecting Malicious Software. 2nd ed., No Starch Press, 2015.

Course Name:	Introduction to Computer Electronics
Course Code:	CS316
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	None

Course Introduction

This course introduces the fundamental concepts and principles of computer electronics, covering both analog and digital circuits. Students will learn about electronic components, circuit analysis, and the practical applications of electronics. The course includes theoretical lessons and hands-on laboratory exercises.

CLO No. Course Learning Outcomes

Bloom's Taxonomy Domain Level

CLO-1 Understand the basic principles of computer electronics and C2 (Understand) circuit theory and identify and understand the functions of various electronic components.

CLO-2 Develop skills in analyzing and designing simple computer C2 (Understand) electronic circuits and gain practical experience through laboratory experiments.

C3 (Apply)

CLO-3 Apply computer electronic principles to real-world problems and projects.

Course Outline

Introduction to Computer Electronics, Overview of electronics and its applications History and evolution of electronic technology, Introduction to electronic components and circuits, Electrical Quantities and Ohm's Law, Voltage, current, resistance, and power, Ohm's Law and its applications, Series and parallel circuits, Practical exercises with resistors Circuit Analysis Techniques, Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL), Thevenin's and Norton's Theorems Mesh and nodal analysis, Solving circuit problems, Capacitors and Inductors, Introduction to capacitors and inductors, Capacitance and inductance in AC and DC circuits, Series and parallel combinations, Time constants and transient response, AC Circuits and Signal Analysis, Introduction to alternating current (AC), Sinusoidal waveforms and phasors, Impedance and reactance, Frequency response and resonance, Diodes and Rectifiers, Semiconductor materials and PN junctions, Diode characteristics and types, Rectifier circuits: half-wave, full-wave, and bridge rectifiers, Clipping and clamping circuits, Transistors and Amplifiers, Bipolar Junction Transistors (BJTs) and Field-Effect Transistors (FETs), Transistor biasing and operation modes, Small-signal amplifiers, Amplifier configurations: common emitter, common collector, and common base Operational Amplifiers, Introduction to operational amplifiers (op-amps), Ideal op-amp characteristics, Basic op-amp circuits: inverting, noninverting, summing, and differential amplifiers, Practical applications of op-amps, Digital Electronics Basics, Introduction to digital logic and binary numbers, Logic gates: AND, OR, NOT, NAND, NOR, XOR, and XNOR, Boolean algebra and simplification techniques, Combinational logic circuits, Sequential Logic Circuits, Flip-flops: SR, JK, D, and T flip-flops, Counters and shift registers, Timing diagrams and clock signals, Memory elements and storage devices, Integrated Circuits and Microcontrollers, Overview of integrated circuits (ICs), Types of ICs and their applications, Introduction to microcontrollers, Basic programming and interfacing with peripherals, Power Electronics, Power supply basics, Voltage regulators and DC-DC converters, Introduction to inverters and motor control, Practical applications in power management, Sensors and Actuators, Types of sensors: temperature, light, motion, and pressure, Interfacing sensors with electronic circuits, Actuators: relays, motors, and solenoids

Course Name:	Cryptography
Course Code: CS317	
Credit Hours: 3 (3-0)	
Contact Hours: 3	
Pre-requisites: None	
1	

Course Introduction

This course provides fundamental concepts of the cryptographic techniques and protocols. It also provides insight as to how cryptography can be used to secure data over a public network.

CLO N	o. Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO-1	Understand basic working of cryptography and	l cryptanalysis C2 (Understand)
CLO-2	Learn mathematical concepts applied to new	cryptographic algorithms. C3 (Apply)
CLO-3	Analyze different cryptographic methods.	C4 (Analyze)

Course Outline

Introduction and Motivation, Cryptography and Cryptanalysis, Classical Encryption Methods, Number theory, Modular Arithmetic, Block Cipher, DES, Finite Fields, Private Key Encryption Methods, AES, Triple DES, RC4, Key Management, Confidentiality using Symmetric Keys, Prime Numbers, Primality Test, Public Key Encryption Methods, RSA, Discrete Logarithm Problem, ElGamal Cryptosystem, Hash Functions, Digital Signatures, Authentication Protocols, Elliptic Curve Cryptography, NP-Hard Problems, Algebraic Cryptography, an overview.

Course Name:	Malware Analysis
Course Code:	CS340
Credit Hours:	3(2-3)
Contact Hours:	2-3
Pre-requisites:	Programming Fundamentals, Operating Systems
Course Introdu	ction

This course provides fundamental concepts of malware analysis. The primary objective of this course is to understand the working of malware. In addition to detect and eliminate Malware. This course will help in learning to analyze and identify the suspect binary, its characteristics and functionalities in a safe environment.

CLO No Taxonon	. Course Learning Outcomes	Bloom
CLO-1	Understand basic working of Malware	C2 (Understand)
CLO-2	Learn how to eliminate different types of Malwares	C3 (Apply)
CLO-3	Analyze Malware characteristics an functionalities	C4 (Analyze)

Course Outline

Introduction to Malware Analysis, Malware and its Types, Importance of Malware Analysis, Goals of Malware Analysis, Static Analysis, Dynamic Analysis, Assembly Lang. and Disassembly Primer, Disassembly Using IDA, Debugging Malicious Binaries, Malware Functionalities and Persistence, Code Injection and Hooking, Malware Obfuscation Techniques, Hunting Malware Using Memory Forensics, Detecting Advanced Malware Using Memory Forensics, Ethical and Legal Considerations, Tools and Environments for Malware Analysis

- 2. Michael Sikorski, Andrew Honig. Practical Malware Analysis. Publisher(s): No Starch Press. 2012.

Course Name:	Wireless and Mobile Security	
Course Code:	CS350	
Credit Hours:	3 (2-3)	
Contact Hours:	2-3	
Pre-requisites:	Introduction to Cyber Security	

Course Introduction

Wireless and mobile security involves protecting wireless networks, mobile devices, and their applications from various security threats. A comprehensive course on wireless and mobile security covers a wide range of topics, from basic concepts to advanced security measures.

CLO No.	Course Learning Outcomes	Bloom's Taxono	my Domain Level
CLO-1	Identify and describe the various s vulnerabilities, and attacks wireles communication systems	security threats, and mobile	C2 (Understand)
CLO-2	Apply cryptographic techniques to	secure wireless	C3 (Apply)

and mobile communications

CLO-3 Evaluate and implement security protocols for wireless networks

C3 (Apply)

Course Outline

Introduction to Wireless and Mobile Security, Importance and challenges of securing wireless networks and mobile devices, Types of wireless networks (Wi-Fi, Bluetooth, NFC, cellular), Common threats and vulnerabilities in wireless and mobile environments, Basics of wireless communication, Wireless network architecture and protocols (IEEE 802.11 standards), Wireless encryption methods (WEP, WPA, WPA2, WPA3), Authentication and access control in wireless networks, Wi-Fi Security, Understanding Wi-Fi security protocols, Wi-Fi attack techniques (e.g., eavesdropping, DE authentication attacks), Defenses against Wi-Fi attacks, Bluetooth protocol and security features, Common Bluetooth attacks (e.g., Bluejacking, Bluesnarfing), Security measures for Bluetooth communication, Overview of other wireless technologies (NFC, Zigbee, etc.) and their security issues, Mobile operating systems (iOS, Android, Windows), Security features of mobile operating systems, Common mobile threats (e.g., malware, phishing, rooting/jailbreaking), Mobile device management (MDM) and security policies, Mobile Application Security, Secure mobile application development practices, Common mobile app vulnerabilities (e.g., insecure data storage, improper authentication), Static and dynamic analysis of mobile applications, Tools for mobile app security testing (e.g., OWASP Mobile Security Testing Guide, MobSF), Mobile Payment and Banking Security, Overview of mobile payment systems (e.g., NFC payments, mobile wallets), Security mechanisms in mobile payment applications, Threats to mobile banking and payment systems, Best practices for securing mobile financial transactions, Network sniffing and packet analysis, Man-in-the-Middle (MitM) attacks on wireless networks, Rogue access points and evil twin attacks, Cellular Network Security, Security features and vulnerabilities in cellular networks, SIM card security, Threats to cellular communication and countermeasures, Bring Your Own Device Security, Securing personal devices in a corporate network, Data leakage prevention and endpoint security, Emerging Trends and Future Directions, Security considerations for 5G networks, Advances in wireless security technologies, Future trends in mobile security, Intelligent Transport System (ITS) security, VANETs Security.

Course Name:	Theory of Automata
Course Code:	CS311

Course Area:	Domain Electives
Credit Hours:	3 (3-0)
Contact Hours:	3-0
Pre-requisites:	None

The course introduces some fundamental concepts in automata theory and formal languages including grammar, finite automaton, regular expressions, formal language, pushdown automaton, and Turing machine. Not only do they form basic models of computation, they are also the foundation of many branches of computer science, e.g. compilers, software engineering, concurrent systems.

CLO	Course Learning Outcomes	Bloom's
No.		Taxonomy
		Domain Level
CLO 1	Explain the different concepts in automata theory and formal languages	C2 (Understand)
CLO 2	Determine solution to simple automata problems.	C4 (Analyze)
CLO 3	Apply their understanding of key notions through complex problem solving	C3 (Apply)

Course Outline

Introduction to Language: Language as a set, string, string terminologies, alphabet, operations on languages (Union, Concatenation, Kleene Closure), Language Representation: Recursive Definition, Regular Expression (Basic Regular Expressions, Complex Regular Expressions using notational short hands), Grammars, Automata Introduction: What is Automata? Types of Automata, Parts of Automata, Determinism, Finite Automata (FA): Definition of FA, Elements of FA, Nondeterministic Finite Automata (NFA), Deterministic Finite Automata (DFA), Working of FA, Regular Expression to NFA conversion, NFA to DFA conversion, Minimization of number of states in a DFA, DFA coding in C language, Kleene's Theorem: Transition Graph (TG), Generalized Transition Graph (GTG), Statement and Proof of Kleene's Theorem, Finite Automata With output: Moore Machine, Mealy Machine, Moore=Mealy, Context Free Grammars: Definition, Derivation, Problems in Context Free Grammars (Ambiguity, Left Recursion, Common Prefixes), Methods for removal of these problems, Chomsky Normal Form (CNF), Pushdown Automata (PDA): Definition of PDA, Elements of PDA, Creation of PDA i.e. CFG=FA, Touring Machines: Definition of Turing Machines, Elements of Turing Machines, Creation of Turing Machines, Pumping Lemma.

Course Name:	Human Computer Interaction
Course Code:	CS319
Course Area:	Domain Electives
Credit Hours:	3
Contact Hours:	2-3
Pre-requisites:	

Course Introduction

This course is designed to provide students with a comprehensive introduction to the field of Human Computer Interaction (HCI). This course aims to impart foundational knowledge in order to design useful interactive system based on the needs and the context of the use of the interactive systems. The course covers topics about the design process and the design principles that should be considered while designing interactive systems that would provide good a user experience. This course helps to understand the concept of evaluating designs and prototypes using different evaluation techniques with assistance of experts and users.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Capabilities of humans and computers that can be utilized while designing interactive systems.	C1 (Remember)
CLO 2	Understand the process of interaction and causes of problems during interactions.	C2 (Understand)
CLO 3	Understand the process of designing interactive systems.	C2 (Understand)
CLO 4	Awareness and application of design principles for improved user experience.	C3 (Apply)

Course Outline

Introduction to the field of HCI, The Human Factor, The Computer Factor, The Interaction, Models of Interaction, Interaction Paradigms, Interaction Design Basics and the design process, Personas, Scenarios Introduction to Wireframes and Prototypes, Design Principles, Principles to Support Usability, Principles of Learnability, Flexibility and Robustness, Shneiderman's Eight golden rules, Nielsen's heuristics, Introduction to Evaluation, Evaluation Techniques, Experts Evaluations, Cognitive walkthrough, Heuristic evaluation, Evaluating through user participation, Laboratory Evaluation, Field Evaluation, Observational techniques, Query techniques, and Think-Aloud techniques, Usability Testing, Contemporary topics and issues, Conducting Experimental, Understanding and the process of A/B Testing.

Course Name:	Penetration Testing	
Course Code:	CS342	
Credit Hours:	3 (2-3)	
Contact Hours:	2-3	
Pre-requisites:	Introduction to Cyber Security	

Course Introduction

Penetration testing, often referred to as ethical hacking, involves a comprehensive approach to evaluating the security of an information system by simulating an attack from malicious outsiders (external testing) and malicious insiders (internal testing).

CLO No. Domain Lev	Course Learning Outcomes vel	Bloom's	Taxonomy
CLO-1	Define and explain the goals and methodologies of penetration testing	C2 (Under	stand)
CLO-2	Identify and comply with relevant laws, regulations, and professional standards	C2 (Unders	stand)
CLO-3	Analyze and prioritize vulnerabilities based on potential impact and exploitability.	C3 (Apply))

Course Outline

Introduction to Penetration Testing, Definition and objectives, Differences between penetration testing and vulnerability assessments, Legal and ethical considerations, Types of penetration testing (black-box, white-box, gray-box), Reconnaissance and Information Gathering, Passive vs. active reconnaissance, Open Source Intelligence (OSINT) gathering, Tools for information gathering (e.g., Maltego, Recon-ng), Footprinting and enumeration, Scanning and Enumeration, Network scanning techniques (e.g., ping sweeps, port scanning), Vulnerability scanning (e.g., Nessus, OpenVAS), Service enumeration, Identifying live hosts and open ports, Exploitation, Common vulnerabilities and exploits (e.g., SQL injection, buffer overflows), Exploitation frameworks (e.g., Metasploit), Manual exploitation techniques, Post-exploitation strategies, Web Application Penetration Testing, Understanding web technologies, Common web application vulnerabilities (e.g., OWASP Top Ten), Tools for web application testing (e.g., Burp Suite, OWASP ZAP), Techniques for exploiting web vulnerabilities, Network protocols and their vulnerabilities, Wireless network security and attacks, Man-in-the-Middle (MitM) attacks, Network sniffing and traffic analysis, Social Engineering, Psychology of social, engineering attacks, Defense strategies against social engineering. Password Attacks, Password cracking techniques (e.g., brute force, dictionary attacks), Tools for password attacks (e.g., John the Ripper, Hashcat), Password policies and best practices, Wireless network

standards and encryption, Wireless attack tools (e.g., Aircrack-ng, Kismet), Wireless network penetration testing methodology, Writing penetration testing reports, Documenting findings and recommendations, Exploiting IoT (Internet of Things) devices, Mobile application security testing, Cloud security and penetration testing, Advanced persistent threats (APTs) and their tactics, Overview of essential tools (e.g. Wireshark), Automation in penetration testing, Understanding laws and regulations related to penetration testing, Real-world scenarios and case studies.

Course Name:	Computer Architecture
Course Code:	CS327
Course Area:	Domain Electives
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	CS207

Course Introduction

This course covers the basics of modern computer organization and architectures, emphasis on understanding interaction between computer hardware and software at various levels. Students will learn concepts of technology, performance evaluation, instruction set design, ALU, data path and control unit design of processors and pipelining for performance enhancement.

CLO No.	Course Learning Outcomes Bloo	om's Taxonomy Domain I
CLO-1	Understand the organization of modern computing systems - microprocessor organization and architecture.	C2 (Understand)
CLO-2	Understand pipelined processor organization & h memory hierarchy & storage devices & multipro	azards, C2 (Understand) ocessors.
CLO-3	Perform performance analysis and evaluation.	C4 (Analyze)
CLO-4	Apply ALU & control unit implementations, memory hierarchy and multiprocessors.	C3 (Apply)

Course Outline

Computer Architecture and Importance for Computer Science Graduates, Instruction Set Architectures(ISA), Complex Instruction Set Computing (CISC), Reduced Instruction Set Computing (RISC), Operations of the Computer Hardware, Assembly Language, Registers,

Data and Instruction Representation, Different Types of Instructions, Loops and IF Statements in Assembly, Supporting Procedures/Functions in Computer Hardware, Supporting Different Data Types in Hardware, Immediate and Addresses in Instructions, Compiling and Linking Processes to Convert a C/Java Program into Assembly and Converting that into Machine Code, Review of Number Systems, Signed and Unsigned Data Types, Arithmetic Operations (Subtraction, Multiplication, Division) in Hardware, Float Data Types and Arithmetic Operations on Float, Evaluating Performance of a System, Latency, Response Time, and Throughput, CPU Execution Time, Calculating CPU Execution Time for a Program, Benchmarks and Amdahl's Law, Processor Design, Building a 32-bit ALU, Processor Data path, Designing a Processor to Execute Instructions and Include Control Unit, Pipelining and Hazards in Pipelining and Solutions, Memory Hierarchy, Caches, Measuring and Improving Cache Performance, Direct Mapped Cache, Fully Associative Caches and Cache Optimizations, Virtual Memory, Virtual Machines. Storage and other I/O topics, Multiprocessors, Multi-cores and Clusters. **Reference Material**

Course Name:	Cyber Law and Cyber Crimes
Course Code:	CS419
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	None

Course Introduction

The course will explore different types of internet-related crime; study relevant computing and network technologies, especially where used either in the commission or detection or prevention of cybercrime; analyze policing, legal, electronic, and other measures designed to combat cybercrime and considers their main strengths and weaknesses; and assess recent sociological and socio-legal theories of cyberspace and apply these theories to the specific field of cybercrime. Topics covered include offenders' use of the internet, computer 'hacking'; media piracy; the ways in which children might be better protected whilst online and cyber security along with current and previous cyber laws in Pakistan and surrounding areas.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO-1	Identify the crimes committed in cyber world and their implications	C2 (Understand)
CLO-2	Understanding how the crimes are done and progresses in time to know the future possibilities	C2 (Understand)
CLO-3	Explore the fundamentals to protect himself and other against such crimes and create a general awareness towards secured environment	C3 (Apply)

Course Outline

Cyber law principles and its significance in the digital age, legal frameworks and regulations, cybercrime classification and analysis, digital rights and responsibilities, cybercrime investigation and forensics, cybersecurity policies and compliance, cybersecurity and intellectual property, emerging issues in cyber law and cybersecurity, cybersecurity incident response and legal remedies, and a capstone project or case studies, Types of Cybercrime: Illegal Access, Data Interference, Computer- related Fraud etc. - Privacy Laws: National and International Regulations in Pakistan ETO 2002, PECCO 2007 and PECA 2016, Middle East Cyber Laws, EU commission Law.

Course Name:	Control System Security
Course Code:	CS418
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	Information Security

Course Introduction

The main goal of the course is to introduce the students to safety and security aspects of modern control systems arising due to their digital and networked implementation. The main course body consists of basic concepts, approaches to and methods of modeling, analysis, and detection of faults and attacks in control systems.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO-1	Identify the basic principles of safety and security in safety and mission-critical control systems	- C2 (Understand)
CLO-2	Explain the control performance under different fault models	C2 (Understand)
CLO-3	Evaluate the risk of different threat scenarios, and the effectiveness of safety and security mechanisms, in a real process	C3 (Apply)

Course Outline

Mathematical description of linear systems in continuous and discrete time in the presence of communication networks, faults, and attacks. Networked control systems. Sampled-data systems. Control performance monitoring. Fault detection and isolation though model-based and data-driven methods. Cyber-security in control systems and typical attack examples and scenarios. Safety and security risk management. Security mechanisms. Safety and security in networked control systems. Control performance monitoring and control under fault. Fault detection and isolation. Cyber-attacks and security mechanisms in control systems.

Course Name:	Cyber Physical Systems
Course Code:	CS351
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	

Course Introduction

This course introduces students with the fundamentals of cyber physical system. The students will be introduced about different algorithm, protocols for adaptive and secure cyber physical systems.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy
CLO-1	Define the algorithms, protocols for adaptive and secure cyber-physical systems	Domain Level C2 (Understand)
CLO-2	Identify different attacks and vulnerabilities in the context of networked cyber-physical systems using a unified framework	C2 (Understand)
CLO-3	Provide a security analysis for a given system in terms of how vulnerable the system is to different types of attack	C3 (Apply)

Course Outline

This course provides an introduction to security issues relating to various cyber-physical. The goal is to expose students to fundamental security primitives specific to cyber-physical systems and to apply them to a broad range of current and future security challenges. Students will work with various tools and techniques used by hackers to compromise computer systems, smart technologies, IoT devices, embedded systems or otherwise interfere with normal operations. This course will offer insights from cutting edge applied research about the strategies and techniques that can be implemented to protect against cyber-attacks.

Course Name:	Open Source Intelligence	
Course Code:	CS352	
Credit Hours:	3 (2-3)	
Contact Hours:	2-3	
Pre-requisites:		

This course offers an in-depth exploration of Panoramic OSINT (Open Source Intelligence), focusing on advanced methods and tools used to gather, analyze, and interpret publicly available information across a wide range of platforms. Students will learn to apply OSINT techniques in specialized areas such as counter-terrorism, dark web investigations, cryptocurrency tracking, and social media monitoring. The course is designed to provide practical skills for real-world applications, equipping students to respond to emerging threats in cybersecurity, law enforcement, and intelligence sectors.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy
		Domain Level
CLO-1	Understand and explain the principles and significance of OSINT in modern intelligence and cybersecurity operations.	C2 (Understand)
CLO-2	Utilize a variety of tools and techniques to collect and analyze data from open sources, including social media, the Dark Web, and cryptocurrency networks.	C2 (Understand)
		C3 (Apply)
CLO-3	Apply OSINT methodologies in specialized areas such as counter-terrorism and crisis management	

Course Outline

Definition and scope of OSINT, Historical development and significance, Legal and ethical considerations in OSINT, OSINT collection frameworks (e.g., Maltego, Recon-ng), Data mining and scraping techniques, Analysis and visualization of OSINT data, Identifying terrorist networks and activities online, Monitoring extremist content on the surface web, Case studies on successful counter-terrorism operations using OSINT, Introduction to the Dark Web: TOR, I2P, and other anonymous networks, Tools for navigating and monitoring Dark Web activities, Fundamentals of blockchain and cryptocurrency, Tracking transactions on the blockchain, Techniques for monitoring social media platforms, Analyzing social media behavior for threat detection, Sentiment analysis and trend identification, Using OSINT in

emergency situations, Automated OSINT using AI and machine learning, Ethical dilemmas in OSINT investigations

3.4 Mathematics and Supporting Courses

This area of the Mathematics and Supporting Courses consists of 4 courses, totaling 12 credit hours, as outlined below:

Course Name:	Probability and Statistics
Course Code:	
Course Area:	Mathematics & Supporting Courses
Credit Hours:	3 (3-0)
Contact Hours:	3-0
Pre-requisites:	None

Course Introduction

Probability & Statistics will provide the foundations of basic statistical measures like, Measures of Central Tendency, Sets and Probability, Random Variables and Probability Distribution, Sampling Theory, Statistical Inference and different types of regressions.

CLO	Course Learning Outcomes	Bloom's
No.		Taxonomy
		Domain Level
CLO 1	Measures of Central Tendency and Variation.	C1 (Remember)
CLO 2	The concept of a Sets, probability, Random Variables and Probability Distribution	C2 (Understand)
CLO 3	Statistical Inference, Regression and Correlation	C4 (Analyze)

Introduction to Statistics and Data Analysis, Statistical Inference, Samples, Populations, and the Role of Probability. Sampling Procedures. Discrete and Continuous Data. Statistical Modeling. Types of Statistical Studies. Probability: Sample Space, Events, Counting Sample Points, Probability of an Event, Additive Rules, Conditional Probability, Independence, and the Product Rule, Bayes' Rule. Random Variables and Probability Distributions. Mathematical Expectation: Mean of a Random Variable, Variance and Covariance of Random Variables. Means and Variances of Linear Combinations of Random Variables, Chebyshev's Theorem. Discrete Probability Distributions. Continuous Probability Distributions. Fundamental Sampling Distributions and Data Descriptions: Random Sampling, Sampling Distributions, Sampling Distribution of Means and the Central Limit Theorem. Sampling Distribution of S2, t-Distribution, FQuantile and Probability Plots. Single Sample & One- and Two-Sample Estimation Problems. Single Sample & One- and Two-Sample Tests of Hypotheses. The Use of PValues for Decision Making in Testing Hypotheses (Single Sample & One- and TwoSample Tests), Linear Regression and Correlation. Least Squares and the Fitted Model, Multiple Linear Regression and Certain, Nonlinear Regression Models, Linear Regression Model Using Matrices, Properties of the Least Squares Estimators.

Reference Material

The following is the recommended list of books (or their latest editions):

- 1. Walpole, Ronald E., Raymond H. Myers, Raymond H. Myers, Raymond H. Myers, Probability and statistics for engineers and scientists. 9th Edition., Pearson, 2011.
- 2. Hayter, Anthony J. "Probability and statistics for engineers and scientists. 4th Edition., Cengage Learning 2012.
- 3. Spiegel, Murray R., R. Alu Srinivasan, and John J. Schiller. Schaum's outline of probability and statistics, 4th Edition., McGraw Hill, 2012.
- 4. Haigh, John. Probability: A very short introduction. Vol. 310. Oxford University Press, 2012.

Course Name:	Multivariate Calculus
Course Code:	
Course Area:	Mathematics & Supporting Courses
Credit Hours:	3 (3-0)
Contact Hours:	3-0
Pre-requisites:	Calculus and Analytic Geometry

Course Introduction

In this course the students will be equipped with the knowledge of complex variables and transforms which they can use as a tool to solve the practical problems in engineering and technology

Course Learning Outcomes	Bloom's
	Taxonomy
	Domain Level
Understand Multivariable Functions	C2 (Understand)
Compute Multivariable Integrals	C5 (Evaluate)
Analyze Vector Fields and Line Integrals	C4 (Analyze)
	Course Learning Outcomes Understand Multivariable Functions Compute Multivariable Integrals Analyze Vector Fields and Line Integrals

Calculus of parametric curves, polar coordinates, coordinates and vectors in threedimensions, dot and cross products, lines and planes in three-dimensions, conic sections and quadratic surfaces, parametric curves in three-dimensions, functions of two and three variables, partial derivatives, tangent planes and differentiability, the chain rule, the gradient and directional derivatives, maxima and minima, Lagrange multipliers, double integrals over rectangles and general regions, double integrals in polar coordinates, applications of double integrals, surface area as double integral, triple integral, cylindrical and spherical coordinates, vector fields and line integrals, Greens theorem, divergence and curl, Stokes theorem, divergence theorem.

Reference Material

The following is the recommended list of books (or their latest editions):

- 1. Stewart, James, Daniel K. Clegg, Saleem Watson, Multivariable Calculus, 9th Edition., Centage Learning, 2012.
- 2. Briggs, William, Lyle Cochran, Bernard Gillett, Eric Schulz, Multivariable Calculus, 3rd Edition., Pearson, 2018.
- 3. Dineen, Seán. Multivariate calculus and geometry, 3rd Edition., Springer-Verlag London, 2014.

Course Name:	Applied Linear Algebra
Course Code:	
Course Area:	Mathematics & Supporting Courses
Credit Hours:	3 (3-0)
Contact Hours:	3-0
Pre-requisites:	Calculus and Analytical Geometry

Course Introduction

To provide fundamentals of solution for system of linear equations, operations on system of equations, matrix properties, solutions and study of their properties.

CLO	Course Learning Outcomes	Bloom's
No.		Taxonomy
		Domain Level
CLO 1	Algebra of linear transformations and matrices	C2 (Understand)
CLO 2	Systems of Equations	C1 (Remember)
CLO 3	Eigenvalues and Eigenvectors	C3 (Apply)

Introduction to Vectors. Solving Linear Equations. Elimination Factorization. Vector Spaces and Subspaces. Orthogonality. Determinants. Eigen values, and Eigenvectors. Linear Transformations. Linear Transformation, Applications of Matrices in Engineering. Graphs and Networks, Marko Matrices, Population, and Economics. Linear Programming. Fourier Series. Applied Linear Algebra for Functions, Applied Linear Algebra for Statistics and Probability, Computer Graphics. Numerical Applied Linear Algebra. Complex Vectors and Matrices. Discrete Transforms and Simple Applications. Cosine Transform, The Discrete Fourier Transform. Simplification and Factorization of the DFT. Matrix. Fast Fourier Transforms. The Discrete Time Fourier Transform.

Reference Material

The following is the recommended list of books (or their latest editions):

- 1. Strang, Gilbert. Introduction to Applied Linear Algebra. 5th Edition., Wellesley-Cambridge Press, 2022.
- 2. Poole, David. Applied Linear Algebra: A modern introduction. 4th Edition., Cengage Learning, 2015.
- 3. Kolman, Bernard, and David Hill. Elementary Applied Linear Algebra with Applications. 9th Edition., Pearson, 2014.
- 4. Strang, Gilbert, and Betsy Coonley. Applied Linear Algebra and Its Applications. 4th Edition., Brooks/Cole, 2005
- 5. Anton, Howard, Irl Bivens, and Chris Davis. Elementary Applied Linear Algebra: Applications Version. 12th Edition., Wiley, 2020.

Course Name:	Technical and Business Writing
Course Code:	
Course Area:	General Education
Credit Hours:	3(3-0)
Contact Hours:	3-0
Pre-requisites:	Functional English

Course Introduction

This course focuses on professional writing, covering essential documents for decisionmaking and action in the workplace, such as proposals, reports, instructions, policies, emails, letters, and product descriptions. It includes practice in both individual and collaborative writing processes to create clear, ethical, and effective documents.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Laval
CLO 1	Organizing information and generating solution	C2 (Understand)
CLO 2	Designing document with best layout and structure	C3 (Apply)
CLO 3	creating the professional report	C6 (Create)

Overview of technical reporting, use of library and information gathering, administering questionnaires, reviewing the gathered information; Technical exposition; topical arrangement, exemplification, definition, classification and division, casual analysis, effective exposition, technical narration, description and argumentation, persuasive strategy, Organizing information and generation solution: brainstorming, organizing material, construction of the formal outline, outlining conventions, electronic communication, generation solutions. Polishing style: paragraphs, listening sentence structure, clarity, length and order, pomposity, empty words, pompous vocabulary, document design: document structure, preamble, summaries, abstracts, table of contents, footnotes, glossaries, cross-referencing, plagiarism, citation and bibliography, glossaries, index, appendices, typesetting systems, creating the professional report; elements, mechanical elements and graphical elements. Reports: Proposals, progress reports, Leaflets, brochures, handbooks, magazines articles, research papers, feasibility reports, project reports, technical research reports, manuals and documentation, thesis. Electronic documents, Linear verses hierarchical structure documents.

- 2. Hardesty, Ray E. Technical and Business Writing for Working Professionals. Xlibris, 2011.
- 3. Brown, Bill Wesley. Successful Technical Writing: Documentation for Business and Industry. 2nd Edition., Goodheart-Willcox, 2000

3.5 BS CySec Elective Supporting Courses

2-3

outilited below.	
Course Name:	Computation in MATLAB
Course Code:	MATH-432
Course Area:	Mathematics & Supporting Courses
Credit Hours:	3(2-3)

Programming Fundamentals

This CySec Elective Supporting area consists of 1 course, comprising 3 credit hours, as outlined below:

Course Introduction

Contact Hours: Pre-requisites:

The course introduces programming and problem solving Using MATLAB. It emphasizes the systematic development of algorithms and programs. Basic or even no programming experience is necessary.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Fluent in the use of procedural statements— assignments, conditional statements, loops, function calls—and arrays	C1 (Remember)
CLO 2 CLO 3	Working familiarity with graphics tools in MATLAB Knowledge of basic vector computation	C3 (Apply) C2 (Understand)

Introduction to MATLAB Windows, Built-in Functions, Arrays, Matrices, Script Files, Plots, Functions and Function Files, Loops, Selection Statements, Polynomials, Curve Fitting and Interpolation.

Reference Material

The following is the recommended list of books (or their latest editions):

- 1. Lipsman, Ronald L., et al. A Guide to MATLAB: For Beginners and Experienced Users. 3rd Edition., Cambridge University Press, 2014.
- 2. Etter, Delores M., David C. Kuncicky, and Douglas W. Hull. Introduction to MATLAB. 4th Edition., Pearson, 2018.
- 3. Moore, Holly. MATLAB for Engineers. 4th Edition., Pearson, 2022.

3.6 General Education Courses

This BS CySec General Education area consists of 12 courses, comprising 33 credit hours, as outlined below:

Course Name:	Applications of Information and Communication
	rechnologies
Course Code:	CS101
Course Area:	General Education
Credit Hours:	4 (3-3)
Contact Hours:	3-3
Pre-requisites:	None

Course Introduction

This course covers the basics of Information and Communications Technologies. Topics include: Overview of ICT; Computing Models; Computer Systems & Components; Number Systems & Computer Codes; System & Application Software; Introduction to Databases & Information Systems; Computer Networks & Internet; Security and Future Trends in ICT.

CLO	Course Learning Outcomes	Bloom's
No.		Taxonomy
		Domain Level

CLO 1	To understand the fundamental concepts and	C2 (Understand)
CLO 2	To develop practical skills in using ICT tools and	C6 (Create)
CLO 3	software. To learn about emerging trends and technologies in the	C3 (Apply)
	ICT field.	

Brief history of Computer, Four Stages of History, Computer Elements, Processor, Memory, Hardware, Software, Application Software its uses and Limitations, System Software its Importance and its Types, Types of Computer, Introduction to CBIS (Computer Based Information System), Methods of Input and Processing, Class2. Organizing Computer Facility, Centralized Computing Facility, Distributed Computing Facility, Decentralized Computing Facility, Input Devices. Keyboard and its Types, Terminal (Dump, Smart, Intelligent), Dedicated Data Entry, SDA (Source Data Automation), Pointing Devices, Voice Input, Output Devices. Soft- Hard Copies, Monitors and its Types, Printers and its Types, Plotters, Computer Virus and its Forms, Storage Units, Primary and Secondary Memories, RAM and its Types, Cache, Hard Disks, Working of Hard Disk, Diskettes, RAID, Optical Disk Storages (DVD, CD ROM), Magnetic Types, Backup System, Data Communications, Data Communication Model, Data Transmission, Digital and Analog Transmission, Modems, Asynchronous and Synchronous Transmission, Simplex. Half Duplex, Full Duplex Transmission, Communications, Medias (Cables, Wireless), Protocols, Network Topologies (Star, Bus, Ring), LAN, LAN, Internet, A Brief History, Birthplace of ARPA Net, Web Link, Browser, Internet Services provider and Online Services Providers, Function and Features of Browser, Search Engines, Common Services available on Internet, Introduction to MS Word, MS Excel, MS PowerPoint.

Reference Material

The following is the recommended list of books (or their latest editions):

- 1. Shelly, Gary B., and Misty E. Vermaat. Discovering Computers: Digital Technology, Data, and Devices. 17th Edition., Cengage Learning, 2022.
- 2. Sinha, P.K. Computer Fundamentals. 8th Edition., BPB Publications, 2020.
- 3. Williams, Brian K. Using Information Technology: A Practical Introduction to Computers & Communications. 11th Edition., McGraw-Hill Education, 2015.
- 4. O'Leary, Timothy J., and Linda I. O'Leary. Computing Essentials 2024. 29th Edition., McGraw-Hill Education, 2023.

Course Name:	Functional English
Course Code:	
Course Area:	General Education
Credit Hours:	3 (3-0)
Contact Hours:	3-0
Pre-requisites:	None

Course Introduction

This is first course in English to the Bachelor of Studies students and covers all the fundamental concept of English composition and comprehension. The course is designed in such a way that students can use this knowledge to further enhance their language skills in English. The course aims at enhancing students' skill and competence in communicating their ideas in writing and speaking in English language. It will primarily focus on four areas of language to help the students achieve proficiency in language use, develop skills in listening comprehension, improve reading efficiency, use the conventions of standard written English with skill and assertion, build-up vocabulary, and clearly and accurately reproduce specific data. It will illustrate the force and effectiveness of simple and direct English.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy
		Domain Level
CLO 1	Essay Writing and Sentence Errors	C1 (Remember)
CLO 2	Deliver Oral Presentations	C3 (Apply)
CLO 3	Narration and Reviewing	C5 (Evaluate)

Course Outline

Paragraph and Essay Writing, Descriptive Essays; Sentence Errors, Persuasive Writing; How to give presentations and Errors; Oral Presentations, Comparison and Contrast Essays, Dialogue Writing, Short Story Writing, Review Writing, Narrative Essays, Letter Writing

Reference Material

The following is the recommended list of books (or their latest editions):

- 1. Langan, John. College writing skills with readings. 5th Edition. New York (2001).
- 2. Khattak, Arif. A Textbook of English Prose and Structure. GIKI Institute, 2000.
- 3. Bloor, Thomas, and Meriel Bloor. The functional analysis of English: A Hallidayan approach. 3rd Edition. Routledge, 2013.
- 4. Klammer, Thomas P. Analyzing English Grammar, 4th Edition. Pearson Education India, 2004.

Course Name:	Expository Writing
Course Code:	
Course Area:	General Education
Credit Hours:	3(3-0)
Contact Hours:	3-0
Pre-requisites:	Functional English

Course Introduction

The course introduces students to the communications so they can effectively communicate their message. The course also covers how to make an effective presentation both written and verbal. Various modern techniques of communication and presentation

skills are covered in this course. Further the course aims to enhance students' linguistic command, so they could communicate effectively in diversified socio-cultural situations; create larger stretches of interactive text in speech and writing; and identify and repair any instances of potential communication break-up.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Principles of writing good English, understanding the composition process	C1 (Remember)
CLO 2	Process of writing, observing, audience collecting, composing, drafting and revising	C2 (Understand)
CLO 3	Presentation skills and presentation strategies,	C3 (Apply)

Course Outline

Principles of writing good English, understanding the composition process: writing clearly; words, sentence and paragraphs; Comprehension and expression; Use of grammar and punctuation. Process of writing, observing, audience collecting, composing, drafting and revising, persuasive writing, reading skills, listening skills and comprehension, skills for taking notes in class, skills for exams; Business communications; planning messages, writing concise but with impact. Letter formats, mechanics of business, letter writing, letters, memo and applications, summaries, proposals, writing resumes, styles and formats, oral communications, verbal and non-verbal communication, conducting meetings, small group communication, taking minutes.

Presentation skills; presentation strategies, defining the objective, scope and audience of the presentation, material gathering material organization strategies, time management, opening and concluding, use of audio-visual aids, delivery and presentation

Course Name:	Discrete Structures
Course Code:	CS120
Course Area:	General Education
Credit Hours:	3(3-0)
Contact Hours:	3-0
Pre-requisites:	None

Introduces the foundations of discrete mathematics as they apply to Computer Science, focusing on providing a solid theoretical foundation for further work. Further, this course aims to develop understanding and appreciation of the finite nature inherent in most Computer Science problems and structures through study of combinatorial reasoning, abstract algebra, iterative procedures, predicate calculus, tree and graph structures. In this course more emphasis shall be given to statistical and probabilistic formulation with respect to computing aspects.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Understand the key concepts of Discrete Structures such as Sets, Permutations, Relations, Graphs and Trees etc.	C2 (Understand)
CLO 2	Apply formal logic proofs and/or informal, but rigorous, logical reasoning to real problems, such as predicting the behavior of software or solving problems such as puzzles.	C3 (Apply)
CLO 3	Design and implement algorithms to solve real world problems	C6 (Create)
CLO 4	Differentiate various discrete structures and their relevance within the context of computer science, in the areas of data structures and algorithms, in particular	C4 (Analyze)

Course Outline

Mathematical reasoning, propositional and predicate logic, rules of inference, proof by induction, proof by contraposition, proof by contradiction, proof by implication, set theory, relations, equivalence relations and partitions, partial orderings, recurrence relations, functions, mappings, function composition, inverse functions, recursive functions, Number Theory, sequences, series, counting, inclusion and exclusion principle, pigeonhole principle, permutations and combinations. Algorithms, Searching and Sorting Algorithms, elements of graph theory, planar graphs, graph coloring, Graph Algorithms, Euler graph, Hamiltonian path, rooted trees, traversals.

Course Name:	Islamic Studies
Course Code:	
Course Area:	General Education
Credit Hours:	3 (3-0)
Contact Hours:	3-0
Pre-requisites:	None

This course will provide the foundational information of Islamic values and implementation of those values in different parts of life.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Introduction to Quranic studies	C1 (Remember)
CLO 2 CLO 3	Seerat of Prophet (SAW) and Introduction to Sunnah Political System of Islam and Islamic Economic System	C2 (Understand) C3 (Apply)

Course Outline

Basic Themes of Quran, Introduction to Sciences of Hadith, Introduction to Islamic Jurisprudence, Primary & Secondary Sources of Islamic Law, Makken & Madnian life of the Prophet, Islamic Economic System, Political theories, Social System of Islam. Definition of Akhlaq.The Most Important Characters mentioned in the Holy Qur'an and Sunnah, SIDQ (Truthfulness)Generosity Tawakkaul(trust on Allah)Patience Taqua (piety). Haqooq ul ibad in the light of Quran & Hadith - the important characteristic of Islamic Society.

Course Name:	Civics and Community Engagement
Course Code:	
Credit Hours:	2 (2-0)
Contact Hours:	2-0
Pre-requisites:	None

This course is designed to provide students with fundamental knowledge about civics, citizenship, and community engagement. In this course, the students will learn about the essentials of civil society, government, civic responsibilities, inclusivity, and effective ways to participate in shaping the society which will help them apply theoretical knowledge to the real-world situations to make a positive impact on their communities.

CLO No.Course Learning OutcomesBloom's Taxonomy
Domain LevelCLO 1Demonstrate fundamental understanding of civics, C2 (Understand)
government, citizenship and civil society.CLO 2CLO 2Understand the concept of community and recognize the
significance of community engagement for individuals and
groups..CLO 3CLO 3Recognize the importance of diversity and inclusivity for
CLO 3C4 (Analyze)

CLO 3 Recognize the importance of diversity and inclusivity for C4 (Analyze) societal harmony and peaceful co-existence..

Course Outline

Concepts of civics, citizenship, and civic engagement, Foundations of modern society and citizenship, Types of citizenship: active, participatory, digital, etc. Structure and functions of government in Pakistan. The relationship between democracy and civil society., Right to vote and importance of political participation and representation. Overview of fundamental rights and liberties of citizens under Constitution of Pakistan 1973. Civic responsibilities and duties. Ethical considerations in civic engagement (accountability, non-violence, peaceful dialogue, civility, etc.) Concept, nature and characteristics of community. Community development and social cohesion. Approaches to effective community engagement. Case studies of successful community driven initiatives. Public discourse and public opinion. Role of advocacy in addressing social issues. Social action movements. The use of digital platforms for civic engagement. Cyber ethics and responsible use of social media. Digital divides and disparities (access, usage, socioeconomic, geographic, etc.) and their impacts on citizenship. Understanding diversity in society (ethnic, cultural, economic, political etc.). Youth, women and minorities' engagement in social development. Addressing social inequalities and injustices in Pakistan. Promoting inclusive citizenship and equal rights for societal harmony and peaceful co-existence. As part of the overall learning requirements, the course may have one or a combination of the following practical activities: Students can collect and share stories from community members. This could be done through oral histories, interviews, or multimedia presentations that capture the lived experiences and perspectives of diverse individuals. Students can organize a community event or workshop that addresses a specific issue or fosters community interaction. This could be a health fair, environmental cleanup, cultural festival, or educational workshop. Students can collaborate with a local nonprofit organization or community group. They can actively contribute by volunteering their time and skills to address a particular community need, such as tutoring, mentoring, or supporting vulnerable populations. Students can organize a cultural exchange event that celebrates the diversity within the community. This could include food tastings, performances, and presentations that promote cross-cultural understanding.

Course Name:	Entrepreneurship
Course Code:	BA565
Course Area:	General Education
Credit Hours:	2 (2-0)
Contact Hours:	2-0
Pre-requisites:	None

This course is designed for anyone looking to start their own business, whether as a main income or a side job, including freelancers, contractors, consultants, and gig economy workers. It focuses on three key areas: the traits and skills that make entrepreneurs successful, how to generate and expand business ideas, and how to ensure these ideas are profitable. These elements will help both current and future entrepreneurs develop and grow their businesses.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO 1	Understand the traits, skills, attitudes and drive necessary to be a successful entrepreneur	C2 (Understand)
CLO 2	Develop personal growth plans to address weaknesses and capitalize on strengths in order to increase their potential to succeed in small business.	l C3 (Apply)
CLO 3	Understand the needs of target markets related to potential viable business idea.	C2 (Understand)
CLO 4	Match potential viable idea to personal assessment profile	. C4 (Analyze)

Course Outline

Entrepreneurship and the Entrepreneurial Mind-Set. Entrepreneurial Intentions and Corporate Entrepreneurship. Entrepreneurial Strategy. Generating and Exploiting New Entries. Creativity and the Business Idea. Identifying and Analyzing Domestic and International Opportunities. Intellectual Property and Other Legal Issues for the Entrepreneur. The Business Plan. Creating and Starting the Venture. The Marketing Plan. The Organizational Plan. The Financial Plan. Sources of Capital. Informal Risk.

Reference Material

3.7 Arts & Humanities Course

Course Name:	Professional Practices
Course Code:	CS423
Course Area:	General Education
Credit Hours:	3 (3-0)
Contact Hours:	3-0
Pre-requisites:	None

Course Introduction

A Computing graduate as professional has some responsibilities with respect to the society. This course develops student understanding about historical, social, economic, ethical, and professional issues related to the discipline of Computing. It identifies key sources for information and opinion about professionalism and ethics. Students analyze, evaluate, assess ethical & professional computing case studies.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy Domain Level
CLO-1	Understand the concepts of key, ethical, managerial and legal issues typically encountered by an IT professional.	C2 (Understand)
CLO-2	Identify, access and critically review appropriate and relevant literature drawn from academic, technical, legal, professional business sources.	C3 (Apply)
CLO-3	Evaluate and critically reflect upon self- presentation.	C5 (Evaluate)

Course Outline

Historical, social, and economic context of Computing (software engineering, Computer Science, Information Technology); Definitions of Computing (software engineering, Computer Science, Information Technology) subject areas and professional activities; professional societies; professional ethics; professional competency and life-long learning; uses, misuses, and risks of software; information security and privacy; business practices and the economics of software; intellectual property and software law (cyber law); social

responsibilities, software related contracts, Software house organization. Intellectual Property Rights, The Framework of Employee Relations Law and Changing Management Practices, Human Resource Management and IT, Health and Safety at Work, Software Liability, Liability and Practice, Computer Misuse and the Criminal Law, Regulation and Control of Personal Information. Overview of the British Computer Society Code of Conduct, IEEE Code of Ethics, ACM Code of Ethics and Professional Conduct, ACM/IEEE Software Engineering Code of Ethics and Professional Practice. Accountability and Auditing, Social Application of Ethics.

3.8 Natural Sciences Course

Course Name:	Applied Physics
Course Code:	
Course Area:	General Education
Credit Hours:	3 (2-3)
Contact Hours:	2-3
Pre-requisites:	None

Course Introduction

The course introduces students with the basic concept of Physics and electronics. Students are also taught Physics laws and other associate topics to prepare them for the advanced level courses in this area. The focus of the course on electric force and its applications and related problems, conservation of charge, charge quantization, Electric fields due to point charge and lines of force and many other useful topics.

CLO No.	Course Learning Outcomes	Bloom's Taxonomy	
	Course Learning Outcomes	Domain	n Level

BS Cyber Security

Course Outline

Electric force and its applications and related problems, conservation of charge, charge quantization, Electric fields due to point charge and lines of force. Ring of charge, Disk of charge, A point charge in an electric field, Dipole in a n electric field, The flux of vector field, The flux of electric field, Gauss' Law, Application of Gauss' Law, Spherically symmetric charge distribution, A charge isolated conductor, Electric potential energy, Electric potentials, Calculating the potential from the field and related problem Potential due to point and continuous charge distribution, Potential due to dipole, equipotential surfaces, Calculating the field from the potential, Electric current, Current density, Resistance, Resistivity and conductivity, Ohm's law and its applications, The Hall effect, The magnetic force on a current, The Biot- Savart law, Line of B, Two parallel conductors, Amperes' s Law, Solenoid, Toroids, Faraday's experiments, Faraday's Law of Induction, Lenz's law, Motional emf, Induced electric field, Induced electric fields, The basic equation of electromagnetism, Induced Magnetic field, The displacement current, Reflection and Refraction of light waves, Total internal reflection, Two source interference, Double Slit interference, related problems, Interference from thin films, Diffraction and the wave theory, related problems, Single-Slit Diffraction, related problems, Polarization of electromagnetic waves, Polarizing sheets, related problems.
